Engineers Without Borders

 September 2020 - June 2021

 College Place, WA

- Responsible for marketing of the chapter.
- Utilized social media (Instagram and Facebook) to promote chapter events and created weekly newsletters for chapter members.
- Worked with other officers to promote the chapter to the student body.

PROJECTS

Personal Website (TypeScript) - [source](#)

- [Check it out!](#)

- Created a personal, Angular website for my projects and art.
 - Used TypeScript for dynamic DOM changes (opacity, mouse events, positioning, etc).
 - Utilized the Angular component architecture as well as data sharing and property binding.
 - Project written in HTML, CSS, and TypeScript.
-

Alkalinity Titrator - UI State Machine (Python) - [source](#)

- Created a new UI state machine framework for the open source Alkalinity Titrator project.
 - Created a comprehensive test suite (unit and acceptance tests) for the UI state machine framework (Pytest).
 - Project written in Python.
-

Theatre Seating Simulator (Python) - [source](#)

- Created a theatre seating simulator that sells and refunds seats.
 - Used the MVC design pattern as the model of interaction between the UI and backend classes.
 - Project was written in Python and implements a graphical user interface using the PyQt5 package.
-

Lights Out (Dart) - [source](#)

- Created a simple 2D arcade-style game.
 - Used the Flame package for Flutter as the game engine.
 - Used the Flutter SDK structure to componentize game parts (player, door, background, etc).
 - Created original artwork as sprites and other assets for the game.
-

Drawit (Java) - [source](#)

- Created a simple drawing app for Android.
 - Used the Path, Paint, and Canvas classes to enable drawing.
 - The project was written in Java using the Android SDK.
 - Created original artwork for button and menu assets.
-
